FALL 1976

(INCLUDES INCOME QUESTION)

THE PULSE METHOD

The Personal Interview

The audience estimates published in Radio Pulse reports are derived from survey data designed and executed by The Pulse, Inc. Measurements can be published only in quantitative terms. The use of such mathematical terms does not imply that these estimates are precise. This survey employs the personal house-to-house interview. Interviewers are sent to pre-selected areas with instructions to interview respondents in their homes. Depending upon specific circumstances attending each interview, such as time of year, later daylight hours, activities in the household, interviews may occur within the household, on the front (back) lawns, on the porch or patio, etc. The emphasis in this survey is that the interview is made at a home. An address is available and thus verification is possible. Any exception to this in-home interview is noted in the Section—"Data Pertinent to the Study."

The Roster

The roster as used in Pulse surveys includes a listing of the radio stations. This listing reports the call letters of the station, AM or FM, and the dial position. Also, identifying themes describe the station. Up to four identifying themes are permissible. The stations are presented in a random order. Stations which do not comply (in time) with the request for advance program schedules and theme identifications are shown on the roster with call letters and dial positions but without identifying themes.

It is not always possible to list all stations on the roster. Fringe stations, outlying stations, non-commercial stations and share-time stations broadcasting relatively few hours may not be shown on the roster when to do so expands the size of the roster beyond a manageable length. In general, the roster will list all stations serving the principal central cities in the area surveyed as shown in Standard Rate and Data Service.

Efforts are made to have latest identifying themes listed. Errors may nevertheless occur in listings. These may be caused by complexity and difficulty in reading the submitted listings, by typographical errors, and/or by incorrect listings submitted by the station.

The purpose in Radio Station Area studies is to estimate and report the audiences to central zone stations. The central zone is generally the metropolitan area from which the large area emanates.

The Interview and Use of the Roster

After the introduction the interviewer is instructed to elicit from the respondents an estimate of when they listened to the radio as the first step. To obtain this information, the interviewer tries to proceed hour by hour through the day, beginning with the time the respondent gets up. Then, the respondents are invited to look at the roster and report their listening. This is the planned procedure and can be executed only if feasible. The interviewer employs discretion in the attempt to proceed in such an orderly fashion. In actual practice in the interview, the respondents influence the procedures. The respondents may proceed immediately to report stations listened to without regard to chronological order through the day. The sequence in the reporting may not be the sequence of the actual listening. They may report stations and programs listened to and then try to relate the time to this listening. The prime objective is to achieve cooperation and understanding so as to obtain the reporting of listening through the day as best as possible. The interviewer is instructed to begin interviewing after 5 PM on midweek days, Monday to Friday and after 10 AM on Saturdays and after 12 noon on Sundays. The listening data collected in the interviews refer to all day yesterday. In some instances, the interviews made on Monday collect the listening reported for Sunday (yesterday) and also for Saturday (day before yesterday). Where this method is utilized for collecting Saturday listening data, mention of it will be made in the Section—"Data Pertinent to the Study."

The roster showing station call letters, dial positions and station themes may help the listener recognize and identify the stations listened to during the time of radio listening. Respondents may not choose to look at the roster and the interview situation can make the showing of the roster awkward or difficult. The interviewer may conclude that the attempt to show the roster and to force the respondent to look at the roster may jeopardize cooperation and the completion of the interview. Thus, there

may be interview situations where the respondents did not look at the roster. In the verification process, efforts are made to determine if the respondents were invited to look at the roster.

In-Home and Out-of-Home Listening

The plan of the interview is to direct the respondent's reporting to radio listening done in the home (at home) first. When this listening has been reported, the interviewer is instructed to obtain the report of out-of-home listening (away-from-home). While this is the general plan, the interview procedure may not necessarily go this way. Listeners may report out of home listening first and may shift the point of reference back and forth from in-home listening to out-of-home listening.

Listenership Data Collected

Interviewers are instructed to obtain from the respondents their actual listening and not general listening preferences. It sometimes happens that general listening preferences are reported. This may go undetected and therefore be recorded by the interviewers. It is also possible that some data may be based on hearsay, guesses or estimates.

The listening activities, which are collected in the interview, refer to the previous day (yesterday). The listening activities collected for weekly "cume" estimates refer approximately to the past week since last, (the same day of the week on which the interview is being made). Listening is a subjective matter which at times may include tuning as distinguished from actual listening.

Selection of the Sample

In metro areas covering more than one county the counties are the organizational unit of the sampling procedures. The estimate of population for each county is taken from SRDS. The total number of sampling points decided upon for the survey is distributed among the counties in proportion to their population distribution. A sampling point consisting of one day's interviewing yields approximately 15 interviews. In selected major markets, the target number of interviews per sampling point is only 12. The source of person estimates is SRDS and this estimate is for total persons.

Sampling Frame I

The sampling frame for selection of the sampling points uses the latest telephone directories available. The selection of the starting address for determining the sampling point is made for Pulse by Metromail. The sample design is a random probability sample of listed telephone homes. However, this survey is not to be construed as being a telephone survey based on telephone homes. The telephone design is based on telephone starts. Phone and non-phone households are included in the sample. The procedure for weighting of the sample for phone and non-phone is described in the Journal of Advertising Research in a report by the statistician J. Stevens Stock who developed this method of sample design. Journal of Advertising Research, Vol. 2, #3 September 1962, "How to Improve Samples Based on Telephone Listings," published by the Advertising Research Foundation. In brief the weighting for this factor is based on the probability of phone-non-phone households found in each sampling point. Depending on the phone penetration percentage in the sampling point, the data for the sampling point are weighted 1.0, 2.0 or 3.0. The phone penetration is based on the respondent's report of having a listed or unlisted phone or no phone.

The interviewer is instructed to proceed in a given direction from the starting address and to complete the assigned number of target households interviewed. He continues until he has successfully interviewed one or more eligible respondents in this assigned target (12-15) or until he has reached the 24th household unit. Upon completion of the assigned target or upon reaching the 24th household unit, the interviewer goes back to the starting point. His procedure now is to complete the assigned target and to revisit interviewed households in the attempt to add additional respondents who were not present at the original visit.

The sampling points are stratified in the counties proportionate to total population. If for some reason, Sampling Frame I known as the "telephone starts" sampling design is not employed, this is noted in the section—"Data Pertinent to the Study." In order to augment the ethnic sample

SELECTION OF THE SAMPLE

This study covers the San Juan, Puerto Rico Metropolitan Area. Interviewing was distributed to approximate the population 12 Years Of Age & Over in the following municipalities:

	Population* 12+	Respondents 12+
Bayamon	117,300	339
Carolina	80,400	203
Catano	18,800	39
Guaynabo	49,800	180
San Juan	371,700	773
Trujillo Alto	22,600	59
Total	660,600	1,593

*The estimated population is based upon 1970 U.S. Census of Population, increased by five percent.

SAN JUAN METROPOLITAN AREA

DATA PERTINENT TO THIS STUDY

HOUSEHOLD SAMPLE

Number of households interviewed:	1,084
No. used in survey:	1,084
No. unusables:	-
Not-At-Home Contacts:	387
Refusals:	72

PERSONS SAMPLE

Men	(18 & Over)	475
Women	(18 & Over)	857
Teens	(12 - 17)	261
Total		1,593

BASE FOR RATINGS

The base for computing persons ratings are applicable to the day parts and the estimated population for projection of these ratings are shown below.

<u>AGE</u>	<u>ESTIMATED POPULATION</u>		<u>MONDAY-SUNDAY BASE</u>	
	<u>MEN</u> (00)	<u>WOMEN</u> (00)	<u>MEN</u>	<u>WOMEN</u>
18 - 24	531	620	69	147

ETHNIC WEIGHTING

For this survey ethnic weighting was not applied.

RESPONDENTS & ABSENTEES

At the time the interview was conducted the following members of the household were:

		<u>PRESENT</u>	<u>ABSENT</u>
Men	(18 & Over)	475	835
Women	(18 & Over)	857	739
Teens	(12 - 17)	261	435

SPECIAL DATES & CIRCUMSTANCES

The following stations achieved the cut off level for reporting:

<u>AM</u>	<u>FM</u>
WAPA	WEYA
WBMJ	WIAC
WHOA	WKAQ
WIAC	WOLA
WKAQ	WORO
WKVM	WQBS
WLUZ	WSRA
WQBS	
WQII	
WRAI	
WRSJ	
WUNO	
WVOZ	

SPECIAL DATES & CIRCUMSTANCES (Continued)

CUT OFF LEVELS AND STATIONS LISTED

In each market an objective share of audience cut off level is utilized in determining which stations are reported and which are included in the miscellaneous. Any station achieving an average Monday-Friday quarter hour total persons rating in at least one day-part (6AM-10AM, 10AM-3PM, 3PM-7PM, 7PM-12 Midnight) equivalent to the required share of audience will be published in the report. Unless stated otherwise, the cut off level is 1.0%.

The audience share level for including stations in the report must be achieved for two (2) consecutive studies within a 12 month period. Exceptions warranting special consideration included new stations since last study, call letter change, program format change. Foreign stations that achieve the cut off level are included in the report only if they are listed in S R D S. All other stations will be included in the miscellaneous category.

The objective cut off level is applied to AM only and FM only stations, individually. For AM-FM combination stations the following criteria are employed.

1. AM-FM affiliates which simulcast for less than 20% of the total number of quarter hours when both stations are on the air simultaneously (Monday-Friday, 6 AM-Midnight) are considered separately programmed stations and are treated as AM-only or FM only stations.
2. AM-FM affiliates which are simulcast for 20% or more of the total number of quarter hours when both stations are on the air (Monday-Friday, 6AM-Midnight) are considered to be simulcast stations. Provided that one of the two stations meets the objective cut off level the second station will be listed, if it has reportable audience.

AM - FM TOTALS

When AM-FM affiliates are simulcast one hour or more Monday-Friday 6AM-12 Midnight a total line will appear for the simulcast periods. A total line will appear for Saturday-Sunday Cumulative audience estimates when AM-FM affiliates simulcast for 50% of the time or more when both stations are on the air (Saturday and Sunday 6AM - Midnight).

For day-part combination (6AM-10AM & 3PM-7PM etc.) a Total will be shown only if a Total line has been shown in each individual day - part.

In one hour time periods, a Total line will be shown only when the stations are entirely simulcast during the time both are on the air and a Total line is being shown in the given day - part.

SPECIAL DATES & CIRCUMSTANCES (Continued)

HOME AND OUTSIDE STATIONS

Any station licensed to cities located within the Metro Survey Area of this market is a "home" station. Canadian and Mexican stations are considered as "home" stations as listed in S R D S. All other stations are considered "outside" stations. The objective cut off level is the same for both "home" and "outside" stations.

THE ROSTER

In every Pulse survey the Roster includes call-letter identification as well as station dial position, and this is used by all interviewers. In many markets the roster also includes station slogans as outlined under the section "The Roster" in the inside front cover.

EXPLANATION OF SPECIAL NOTATIONS

- X - Does not broadcast for this time segment.
- @ - Does not broadcast for complete period due to limited broadcast hours, estimates are not adjusted.
- - Indicates less than 1/2 of one percent.
- () - Parenthesis indicates unadjusted shares or estimates.
- + - Stations adjusted for actual broadcast hours.

HOURLY RATINGS

Hourly rating estimates, 5AM - 6AM and 12 Midnight to 1AM, are not adjusted.

DAY - PART COMBINATION ADJUSTMENTS

The Buyers Guide section of this report will not have symbol notations. However, inspection of individual day-part symbols in the Programmers Guide will give the user the proper identification for day - part combinations (6AM - 10AM / 3PM - 7PM, etc.).

- A) All pluses (+) or plus (+) and no other symbol denotes day - part combination average quarter hour estimates have been adjusted.
- B) Plus (+) and any other symbol (@, X), denotes day-part combination average quarter hour estimates have not been adjusted.

Buyer's Guide

EXPLANATION

These figures are a combination of the individual age breaks reported in the Programmer's Guide Section of this report. If no Radio Station Area has been conducted in the Market, Central Zone figures-only are presented.

The age combinations are as follows:

MEN	PAGE	WOMEN	PAGE	TOTAL ADULTS	PAGE	PERSONS	PAGE
18+	1	18+	13	18+	25	12-24	37
18-34	3	18-34	15	18-34	27		
18-49	5	18-49	17	18-49	29		
25-49	7	25-49	19	25-49	31		
25-64	9	25-64	21	25-64	33	TEENS	
35-64	11	35-64	23	35-64	35	12-17	39

The Central Zone data are presented by Average ¼ Hour Estimates-Projections, Percent and Cume Projections. The Radio Station Area data are presented by Average ¼ Hour Estimates-Projections and Cume Projections.

Each pair of facing pages encompass one of the above age combinations. . . for the following time periods:

(Negro & Spanish) supplemental sampling in concentrated ethnic areas may be added when deemed necessary. This also will be noted in the Section—"Data Pertinent to the Study." In this case the sampling system employs the latest available population estimates as described in Sampling Frame II.

Sampling Frame II

This method is an alternate sampling procedure when the method described above under Sampling Frame I is not available. Generally this is the case in ethnic samples, e.g., radio listening surveys of Negro or Spanish population, or of large geographic areas. In such studies the following sampling method is utilized.

Where 1970 U.S. Census data are available (the larger cities) with block statistics, the blocks to be sampled are selected by a statistical procedure. The total number of housing units in the city is divided by the number of sampling points to be picked in the city. This division yields the number of housing units in each area to be covered by one sampling point. This number also becomes the skip interval for choosing the Census Tracts. The starting Census Tract is chosen by a random number between 1 and the skip interval. Starting with the first Census Tract, the housing units in each Census Tract are cumulatively summed until the Census Tract is reached containing the household equal to the random number. Then the skip interval is added to determine the successive Census Tracts to be selected. Within the Census Tract, the block to be used is selected by use of a table of random numbers. These blocks constitute the sampling points within the Counties and Cities where such block statistics are available.

For certain standard statistical metropolitan areas, census tract dwelling unit data are available PC(1)A for the outlying areas beyond the central cities. In these situations, the census tracts within the counties are listed with population. A similar statistical counting procedure as above in the selection of blocks is employed to select the census tract. Within the census tract the sampling point is selected and located by a random geographic procedure. The sampling point may be a block or a cross-road depending upon the detail in the map. Either this procedure or the one employing Census PC(1)A series, as described below, will be used. Accuracy may be affected by sample selection and quality of sampling material and sampling techniques which yield the sample design.

In the balance of the county or in counties where no block or census tract statistics are available, a similar procedure is employed using the 1970 Census PC(1)A Series (when available). This series lists the population for each county by its minor civil divisions in alphabetical order. The total population of the civil divisions divided by the number of sampling points yields the skip interval for selecting the sampling points. This time the sampling points are the civil divisions (or Census divisions). In these civil divisions maps are used to select the location of the sampling point by a random geographic procedure. Depending upon the detail shown in available maps, either blocks or cross-roads are selected.

Changes of sampling points become necessary for a number of reasons. In some instances, it turns out that the available official statistics are not current. Blocks are torn down, new ones are constructed, residential blocks become all commercial, and considerations of the personal safety of the interviewer may become involved. When this happens, changes may become necessary. The interviewer is instructed to contact the field director or supervisor who checks with the New York office as to the substitution to be made. If time does not permit checking with the New York office first, the supervisor selects a new location in accordance with general written instructions as to the direction in which to proceed or the interviewer in the field may make a choice in order not to delay the data collection. In either case this is checked later with the New York office for approval. If the change is unacceptable, the work is done over.

For purposes of this study, substitutions of sampling points are defined as follows: block is commercial, block is dangerous, interviewer could not locate the block. Other changes are remapping or extensions of the original sampling points.

Acceptance of Interviewing

The local supervisor is instructed to validate one interview out of each day's work of each interviewer—usually one out of 12-15 interviews. This is done over the telephone in a call to the household interviewed as soon after the interviewing as possible. This may be several days or even a week or two later depending upon the receipt of the work by the supervisor from the interviewer.

In the New York office, a similar telephone validation using the WATS line is undertaken for one out of each day's work of each interviewer. In general, an alternating procedure is employed in checking the same household validated by the local supervisor on one day's work and a new one on the second day's work. For non-phone households, a verification is done by mail to half of these households: These include actual non-phone households and households where telephone numbers are not available. Depending upon the results of this verification process (further verification if necessary) the interviewing is accepted or rejected and may

be ordered re-surveyed. The questionnaires are scanned for completeness; and omissions or doubtful items are edited in accordance with written instructions.

Data Processing

The IBM 360 Data Processing System is employed for computing the audience estimates. The questionnaires are key-punched on IBM cards.

Internal checks on key punch accuracy are made by the computer for more than 10 prime data processing factors. Verification of key punching up to 20% of the punched cards is made when deemed necessary. If 5% or more of the cards possess an error in punching, the key punch operator's work is totally verified.

Audience estimates for stations broadcasting limited hours due to late sign-on or early sign-off between the hours of 6 AM-12 Midnight are adjusted for actual broadcast hours. A station will be adjusted in the 7 PM-Midnight period when it is on the air 40 percent or more of the time.

Audience estimates are not adjusted for the following situations: FM station duplicating AM facility 15 minutes or more; Post midnight estimates; all day share of audience estimates.

Broad day part data are presented for those time periods covered by the report months listed on tables.

All day share of audience estimates are computed by dividing the average Total Market projection estimate into each station's average projection estimate. In smaller population markets the shares may total to more than 100% due to rounding of the projection estimate to nearest hundred and rounding shares to nearest whole percent.

Broad day part share of audience estimates may total to more than 100% due to adjusting station to actual broadcast hours with no corresponding adjustment to Total Market estimates.

Sample Size and Weighting Procedures

The actual number of interviews used for the processing of the report is reported under the section "Data Pertinent to the Study." The sample size employed for ratings processing does not include the "Not-At-Homes." These are households which were unoccupied at the time the interviewer approached the household. This number is reported but takes no part in the data processing. The number of interviews in the computation base for ratings is not necessarily equal for each of the days during the survey period, nor is interviewing necessarily made on each day during the survey period. Inability to secure cooperation from all households in the pre-designated sample or the failure of the cooperating households to provide usable data may result in error, sometimes referred to as non-response error.

In markets where there are substantial ethnic minorities, namely Spanish and Negro and where there are stations with programming directed toward these groups, an attempt is made to weight the make-up of the sample so that these minorities are in the sample close to their proportions in the population. Possible understatement or overstatement may result from such weighting.

The telephone-non phone weighting has been referred to earlier in the section under Sampling Frame I. This study was weighted for Ethnic Balance, County Distribution, and Age and Sex employing the latest acceptable available estimates of population. Weighting for Time Spent at Home is a modification of the "Nights at Home Technique" of weighting. This method was described in two articles by A. Poitiz and W. Simmons in the Journal of the American Statistical Association.

1. An attempt to get the "Not at Homes" into the Sample without Callbacks, Vol. 44, 9-31.
2. Note on "An attempt to Get the "Not-at-Homes" Into the Sample without Callbacks, Journal of the American Statistical Association, Vol. 45, 136-37.

The basic plan is to weight respondents inversely to their time at home. Depending on the at-home percentage estimate the data for each respondent are weighted 1.0, 1.5 or 2.0.

The target number of sampling points is reported, and also the number of substitutions and number of sampling points not surveyed are reported. In addition, the number of respondents who took part in the interview is reported. A respondent is one who is at home at the time of the interview and makes his listening known either directly or indirectly through another household member.

The number of absentees are also reported. Adults are 18 years of age and over; Teenagers are 12 to 17.

Cut Off Levels and Stations Listed

In each market, an objective share of audience cut-off level is utilized in determining which stations are reported and which are included in the Miscellaneous. Any station achieving an average Monday-Friday quarter hour total persons rating in at least one day-part (6 AM-10 AM, 10 AM-3 PM, 3 PM-7 PM, 7 PM-12 Midnight by half hour units) equivalent to the required share of audience will be published in the report. Unless stated

otherwise in the Section—"Data Pertinent to the Study," the cut-off level is 1.0%.

The audience share level for including stations in the report must be achieved for two (2) consecutive studies within a 12 month period. Exceptions warranting special consideration include new stations since last study, call letter change, program format change. Foreign Stations that achieve the cut-off level are included in this report only if they are listed in SRDS. All other stations will be included in the miscellaneous category. In instances where an FM station duplicates in part an affiliated AM station's programming, the cut-off determination will pertain to its unduplicated programming. This cut-off level is not uniform in all markets and may change from time to time. In studies where a part(s) of a larger total area is reported separately, the cut-off level is applied separately to the part(s) and to the total area. Non commercial stations are not reported. Their audience levels are added to the miscellaneous category.

Where there is duplication of programming between an AM and FM station, the audience estimates are combined and published as one single total credited to the AM. Where there is no duplication, audience estimates are processed and published separately if the cut-off level is met. For purposes of reporting only, the duplication of programming of less than 15 minutes duration is not considered duplication for the quarter hour. The cut-off level remains the same.

In the event that the station whose data are not published is a subscriber it will be furnished its own audience estimates on a confidential basis.

Ratings Estimates

The audience measurements in this report are estimates of audience size. The Rating gives the average ¼ hour rating of the total listening audience (in-home and out-of-home combined) to each station as the percentage of all persons interviewed. In radio station area studies audience estimates are shown for the Metropolitan Area, Home County or inner central zone and for the total area.

Ratings are shown in tenths in order to differentiate these measurements from shares which are shown in whole percentage points. The sum of the separate figures in each column may total slightly more or less than the total of all rating points (TRP). This result arises from the process of rounding off to the nearest tenth of a percent.

Share of Audience Estimates

These shares are percentages indicating the relative popularity of the stations during the day. The base, total persons listening to all stations divided into the total persons listening to each station yields these share data.

Persons Reached Estimates

These data are presented for the average quarter hour of the day parts for Monday through Friday combined and for Saturday and Sunday when surveyed. The results are reported by:

MEN, 18 years and over; WOMEN, 18 and over; TEEN, 12 to 17; and TOTAL. The data report the estimated number of listening persons, rounded to hundreds reached by the station. These data are reported for each of the above person categories, both for rating and projection.

Age groups are reported separately for men and for women; 18-24; 25-34, 35-49, 50-64 by the day parts. The total of Men and of Women includes the age group 65 and over and thus can be larger than the sum of the 4 reported age groups. Finally the summation of the figures for the individual stations may be greater than the P.U.R. (Persons Using Radio) figures due to the rounding process.

The estimated population is based upon U.S. Census of Population, PC(V2) updated by the latest available SRDS estimates of population.

FM Audience

Listening to an FM station duplicating the AM station programming is credited to the AM station. If no AM-FM duplication information is received from the station or is available (SRDS listings) all listening to the FM station is treated as unduplicated.

Daily and Weekly Cume Estimates

The daily audience estimates are tabulated from the questionnaires used in this study. The listening data for this, covers all day yesterday from time of getting up to going to sleep. The weekly audience estimates are derived from questions dealing with stations listened to or heard in the course of the past week in addition to listening any time yesterday. A count of the listeners to each station is made and divided by the sample size to yield the percentage which projects out against population to arrive at the listener estimates. This tabulation is based on the interviewing covering Monday to Friday but does refer to a seven day week. The weekly cume data are processed specifically for the AM & FM stations as reported by the listeners in the weekly cume questions. Therefore, the cume estimates for an AM & FM station are not necessarily additive because of the possibility of audience duplication between the AM & FM stations. All stations is the total estimate of persons and households

listening to radio in the course of the day and the week. In several instances (particularly total cumulative) audience estimates may achieve 100% of the estimated population. Due to rounding procedures there is a possibility that the computed estimates may be greater than 100%. In the event that this has occurred the estimate is printed as 100%. The addition of Men, Women and Teens may sometimes add just over or under the Total Person Cumes because of the process of rounding out to the nearest hundred.

Survey Area Definitions

A Radio Station Area study includes 2 sets of audience estimates:

1. The Central Zone usually the Metropolitan Area surveyed by PULSE for the standard syndicated Radio Audience Measurement Service. In a few markets, this Central Zone core may be larger than the census defined SMSA.
2. The Radio Station Area includes 1 and additional counties in which the stations originating from the Central Zone have individually or together achieved 25% shares (PULSE CP 1971-72) or greater of the daytime audience, and all other counties required to achieve a daytime weekly cume of 90% (PULSE CP 1971-72) for each Central Zone station.

Thus, for all practical purposes the Radio Station Area may be considered to approach the total audience for each station. In the case of each station, the Counties remaining in the non-included 10% or less are generally remote and in which the station achieves very little or no reportable daytime share of audience. There may be exceptions when a station's coverage signal extends to remote counties making it virtually impossible to establish a manageable & continuous area. Also in rare instances, counties may have been deleted or added to yield a continuous survey area.

There may be some instances where the area remains the same as defined by Pulse in years prior to 1974.

Standard Error Measurement

Errors in measurement cannot be computed for the measurements in this survey because the standard error formulas usually employed refer to a true probability sample. Thus, no claim is made as to the true degree of preciseness of these measurements. The usual standard error formulas are not applicable for these measurements.

Possible Survey Errors

PULSE utilizes its best efforts to comply with the standards set up in its consent order with the Federal Trade Commission. Nevertheless, no claim is made that the survey is free of all errors. Errors may occur in the interview, in securing the data, in the processing of the data and the report, etc. Accuracy in the reporting of listening and/or the characteristics of the household or individual, sometimes referred to as response error, may occur. Therefore, non-sampling errors cannot be warranted to be zero. The normal validation and verification may not always uncover such errors. However, if errors do crop up and are brought to Pulse's attention within 60 days of the issuance of the report or prior to the issuance of the next report, whichever is first, corrections will be made whenever possible.

Privileges

It is understood and agreed that the report will be kept strictly confidential, that the property therein remains in THE PULSE, INC., that neither the whole nor any part thereof may be disclosed to anyone but the purchaser, its clients or bona-fide prospective clients and that physical possession of the report shall not be released by the purchaser or its representative.

This service is an impartial one designed to measure the radio audience and report the information to its subscribers, who are supporting the service cooperatively. For this reason, this report may be utilized in any promotional or advertising matter by the subscriber only if identification of other stations and programs is not disclosed. In reproduction of any of this material, the data must be properly identified. Date of the report and area surveyed must be included in such matter. The use of these PULSE data in promotion and advertising must be cleared with PULSE prior to publication. Violation of these privileges may result in immediate cancellation of the subscription to PULSE, and may subject the subscriber to claims for damages which may be sustained by PULSE or others. In addition, a complaint will be filed with the Complaint Bureau of the F.C.C.

Explanation of Special Notations

A blank is used rather than 0.0 when no listeners were found for a particular station and when the computation does not yield a reportable number (less than ½ of a percent or less than 50 listener persons).

- x Does not broadcast independent programming for this time segment, or station broadcasts daytime only.
- @ Does not broadcast for complete period due to limited broadcast hours and/or AM-FM duplication and estimates are not adjusted.
- Indicates less than ½ of one percent.
- () Parentheses indicate unadjusted shares.
- + Station adjusted for actual broadcast hours.
