NOTICE

This report is to be used by Executives, Technical and other appropriate personnel of the subscriber. The report will not be lent, substantially copied or otherwise divulged to anyone not having a legitimate business interest in the subject of the reports and especially to non-subscribers.

The subscriber recognizes that all printed or written material supplied hereunder is furnished merely to convey the information therein contained and that such material remains the property of Clapp and Mayne, Inc. lent to the subscriber for confidential use in accordance with the provisions of the agreement existing between the parties.

Introduction

The Radio Audience Profiles covering the period January 10-January 30, 1972 inclusive, provide statistics on two categories of listening in the San Juan Metropolitan Area.

The survey has been designed so that the number of listeners in each of the two categories - (1) listeners at home, and (2) listeners in automobiles - may be added together so as to obtain an estimate of total listeners (except those away from home) during any time period in the San Juan Metropolitan Area.

The relative importance of each category of radio listening and the total magnitude of radio listening may be seen in the table given below.

Estimated Average Number of Radio Listeners by
Category of Listening and Time Period
January 10 - January 30, 1972

<u>Time</u>	<u>T h o u s a n d s o f L i s t e n e r s</u>		
	<u>Total</u> <u>Listeners</u> ^{1/}	<u>At</u> <u>Home</u>	<u>In</u> <u>Automobiles</u>
Monday-Friday			
6:00 - 8:00 A.M.	346.7	217.9	128.2
8:00 - 12:00 A.M.	150.9	118.2	31.9
12:00 - 4:00 P.M.	96.6	55.0	41.2
4:00 - 7:00 P.M.	191.5	104.0	86.8
7:00 - 10:00 P.M.	108.6	51.8	56.3
Saturday-Sunday			
6:00 - 12:00 A.M.	165.6	97.5	67.5
12:00 - 6:00 P.M.	171.0	89.3	81.1
6:00 - 10:00 P.M.	140.9	64.9	75.7
W/F/Sunday			
2:30 - 5:30 P.M.	184.1	106.3	77.3
M/TU/Thursday			
2:30 - 5:30 P.M.	135.3	68.4	66.5

^{1/} Total listeners computed directly. The sum of the listening categories is slightly lower due to the roundings of numbers which occurred in the large number of computations.

In order to obtain separate projected number of estimates in the home and in automobiles, it was necessary to develop separate estimates of the population at home and in automobiles during each time period. The estimates and the method of doing this is described in the section on scope and methodology given in Appendix A of this report.

The ratings are not household ratings as in the case of the Television Audience Profile Reports, but represent the percentage of the estimated population in each category listening to a particular station.

To assist the users of Radio Audience Profiles, each station was requested to supply information concerning any promotional activities which might have been carried out during the survey period. The replies from the stations have been reproduced in Appendix C.

PART 6
APPENDICES

APPENDIX A
SCOPE AND METHODOLOGY

SCOPE AND METHODOLOGY

Coverage

This survey of the Radio Audience Profiles refers to the population of the "San Juan Metropolitan" area defined as the area consisting of the following municipalities:

1. Bayamón
2. Carolina
3. Cataño
4. Guaynabo
5. San Juan - Río Piedras
6. Toa Baja
7. Trujillo Alto

The total population of the above defined area was estimated by Clapp and Mayne, Inc. to be 931,000 as of December 31, 1971. ^{1/}

The universe referred to in the survey was the total number of persons living in the San Juan Metropolitan area as defined above, who were at home or in auto. Persons "away from home (including those not in auto)" are not considered in the universe.

The survey was conducted during the three-week period starting January 10 and ending January 30, 1972. For the purpose of this survey, the radio audience was considered to be composed of two segments or areas of listening, namely:

1. In-home audience; and
2. Car (auto) audience

The above two types of listeners were selected through a scientifically prepared probability sample planned to yield a minimum of 500 persons to represent the population of each of the two kinds of listeners for every period (time slot) for which the radio audience measurement was desired. The actual number of persons covered in the sample for the two types of listeners was 16,130.

Time Coverage

The survey covered the time period between 6:00 A.M. and 10:00 P.M., which was divided into eight separate weekly slots, distributed as follows:

	<u>Time Slot</u>
1. Monday through Friday (repeated programs)	6:00 A.M. to 8:00 A.M.
2. " " " " "	8:00 A.M. to 12:00 Noon
3. " " " " "	12:00 Noon to 4:00 P.M.
4. " " " " "	4:00 P.M. to 7:00 P.M.
5. " " " " "	7:00 P.M. to 10:00 P.M.
6. Saturday and Sunday (combined)	6:00 A.M. to 12:00 Noon
7. " " " " "	12:00 Noon to 6:00 P.M.
8. " " " " "	6:00 P.M. to 10:00 P.M.

^{1/} Based on the P. R. Planning Board's estimate of population for the Island adjusted for the 1970 Population Census.

In addition to the audience measurements for each of the above time slots, the audience profile was also obtained for the horse-racing period, that is, the time slot consisting of Wednesday-Friday-Sunday between 2:30 P.M. to 5:30 P.M., and the non-racing days except Saturday, that is, the time slot consisting of Monday-Tuesday-Thursday between 2:30 P.M. to 5:30 P.M.

Sampling Procedure

The sample for the radio audience consisted of two independent samples representing two types of listeners as indicated above. The sampling technique used in each case was a stratified Multistage Cluster Sampling Method. The procedure in detail is as follows:

1. In-home Listeners: The sample was drawn from the Clapp and Mayne, Inc. Master Sample of households of the municipalities covered in the survey. The households in the universe are grouped and identified by residential areas (primary units) such as barrios, suburban housing developments, public housing projects, condominiums and slums. In total, the number of primary units in the surveyed area amounted to 765. Each of these were then classified according to its socio-economic level. These primary units were used as the sampling frame to select at random blocks or segments of households from each in proportion to the size of the unit within the socio-economic classification (strata) making the sample estimates self-weighting.

The sample of blocks or segments of households from the primary unit for each time slot was selected independently and assigned at random^{2/} within each week and over the entire period of the survey so as to replicate the sample in order to represent the characteristics of the area. Within each block, the household to start the interview was preselected at random. The other households for the time slot were then interviewed in a pre-determined random direction within and around the block in order to introduce heterogeneity in the "cluster" formed within the primary unit, thus reducing the clustering effect to a minimum. Eight independent samples, one for each time slot, were thus prepared for each week from the sampling frame. The number of clusters needed for the total sample was 51 and distributed by time slots and days of the week at random in such a way as to obtain equal efficiency of estimates for each slot.

The information on radio listening at home was obtained by personal coincidental technique, through a questionnaire. (See Appendix B - Questionnaire 1)

For computing the audience measurements, however, necessary weighting factors for strata were used to obtain the best estimates, depending upon the sampling fraction with the universe of the number of persons in the population.

2. Auto Radio Audience Sample: The sample of the radio audience in the car was obtained by a random selection of the intersections of the survey area based on the information obtained from the Puerto Rico Highway Authority and the Department of Public Works. Over the period of the survey, 46 intersections were sampled, which yielded 3,776 cars interviewed. The socio-economic level of the owner of the car was determined by asking him the question about his residential place.

^{2/}For randomization, A Million Random Digits, published by Rand Corporation, was used.

The driver of the car, when stopped at the intersection by the signal light, was asked if the car had a radio, and if on, what station was being listened to. Also noted was his residence and the number of persons in the car by age and sex (See Appendix B - Questionnaire 2)

For each time slot, again, appropriate weighting factors were applied based on the probability in the universe of the population estimated of the car passengers for each time slot. (See Preparatory Survey)

Preparatory Survey

In order to obtain the population estimates for the two kinds of listeners for each time slot in the universe, it was necessary to know the proportion of the population (a) in home; (b) in cars; and (c) at other places, away from home- for each time slot in the universe as these proportions do not remain constant for different periods of time. Hence, a preparatory survey was carried out to estimate these proportions using questionnaire 3. An independent sample of households of the survey area was prepared using a stratified multistage cluster probability sample. From the data obtained, the estimates were prepared for the population proportion for each time slot, which was (a) in home; and, (b) car. The population estimates for the two types of listeners for each time slot are given in the following table.

Population Estimate of the San Juan Metropolitan Area
By Time Slot
(as of December 31, 1971)

	<u>Average Number During Time Period</u>		
	<u>Total</u>	<u>In Home</u>	<u>In Auto</u>
Monday through Friday			
6:00 - 8:00 A.M.	681,380	488,890	192,490
8:00 - 12:00 M	486,320	427,070	59,250
12:00 - 4:00 P.M.	504,360	423,230	81,130
4:00 - 7:00 P.M.	672,240	517,660	154,580
7:00 - 10:00 P.M.	813,240	720,880	92,360
Saturday and Sunday			
6:00 - 12:00 M	790,240	674,660	115,580
12:00 - 6:00 P.M.	713,900	582,510	131,390
6:00 - 10:00 P.M.	750,590	608,020	142,570
Race Day(Wed.-Fri.-Sun.)			
2:30 - 5:30 P.M.	634,760	510,000	124,760
Non-racing Day, except Saturday (Monday-Tuesday-Thursday)			
2:30 - 5:30 P.M.	605,970	479,750	126,220

The estimates of these proportions were used to compute the weighting factors needed to project the sample results to the entire survey universe for the two areas of listening.

Interviewing Procedure

All interviewers were given training for the interviewing of each of the three questionnaires. The interviewers were accompanied by the supervisor on their first visit to the field. Supervision was carried through continuously throughout the survey. Verification was conducted on a 10% basis of actual interviewing in such a way that every interviewer's work was verified to a satisfactory extent.

The interviewing aids consisted of:

1. a transistor radio for station and program verification
2. diagram of radio dials - AM and FM
3. demographic group flash card
4. radio station identification flash card specifying call letters, dial position and station slogans
5. interviewers manual of instructions for each questionnaire
6. map identifying area where interview work was to be carried out.

Organization of the Survey

The survey staff consisted of 41 members and was organized as follows:

- 1 Principal
- 1 Project Director
- 1 Statistical Expert
- 1 Statistical Assistant
- 1 Field Manager
- 2 Area Supervisors
- 23 Interviewers
- 5 Editing and Coding Technicians
- 2 Computing Experts
- 4 Administrative Assistants

Data Processing

The results of the sample data were processed on the computer IBM type 360/30. The questionnaire information, after editing and coding, was directly punched on the IBM cards. Several programs for the Computer were specially prepared for the data of this survey. The tabulations from the print-out of the machines were used to prepare the printed report directly.

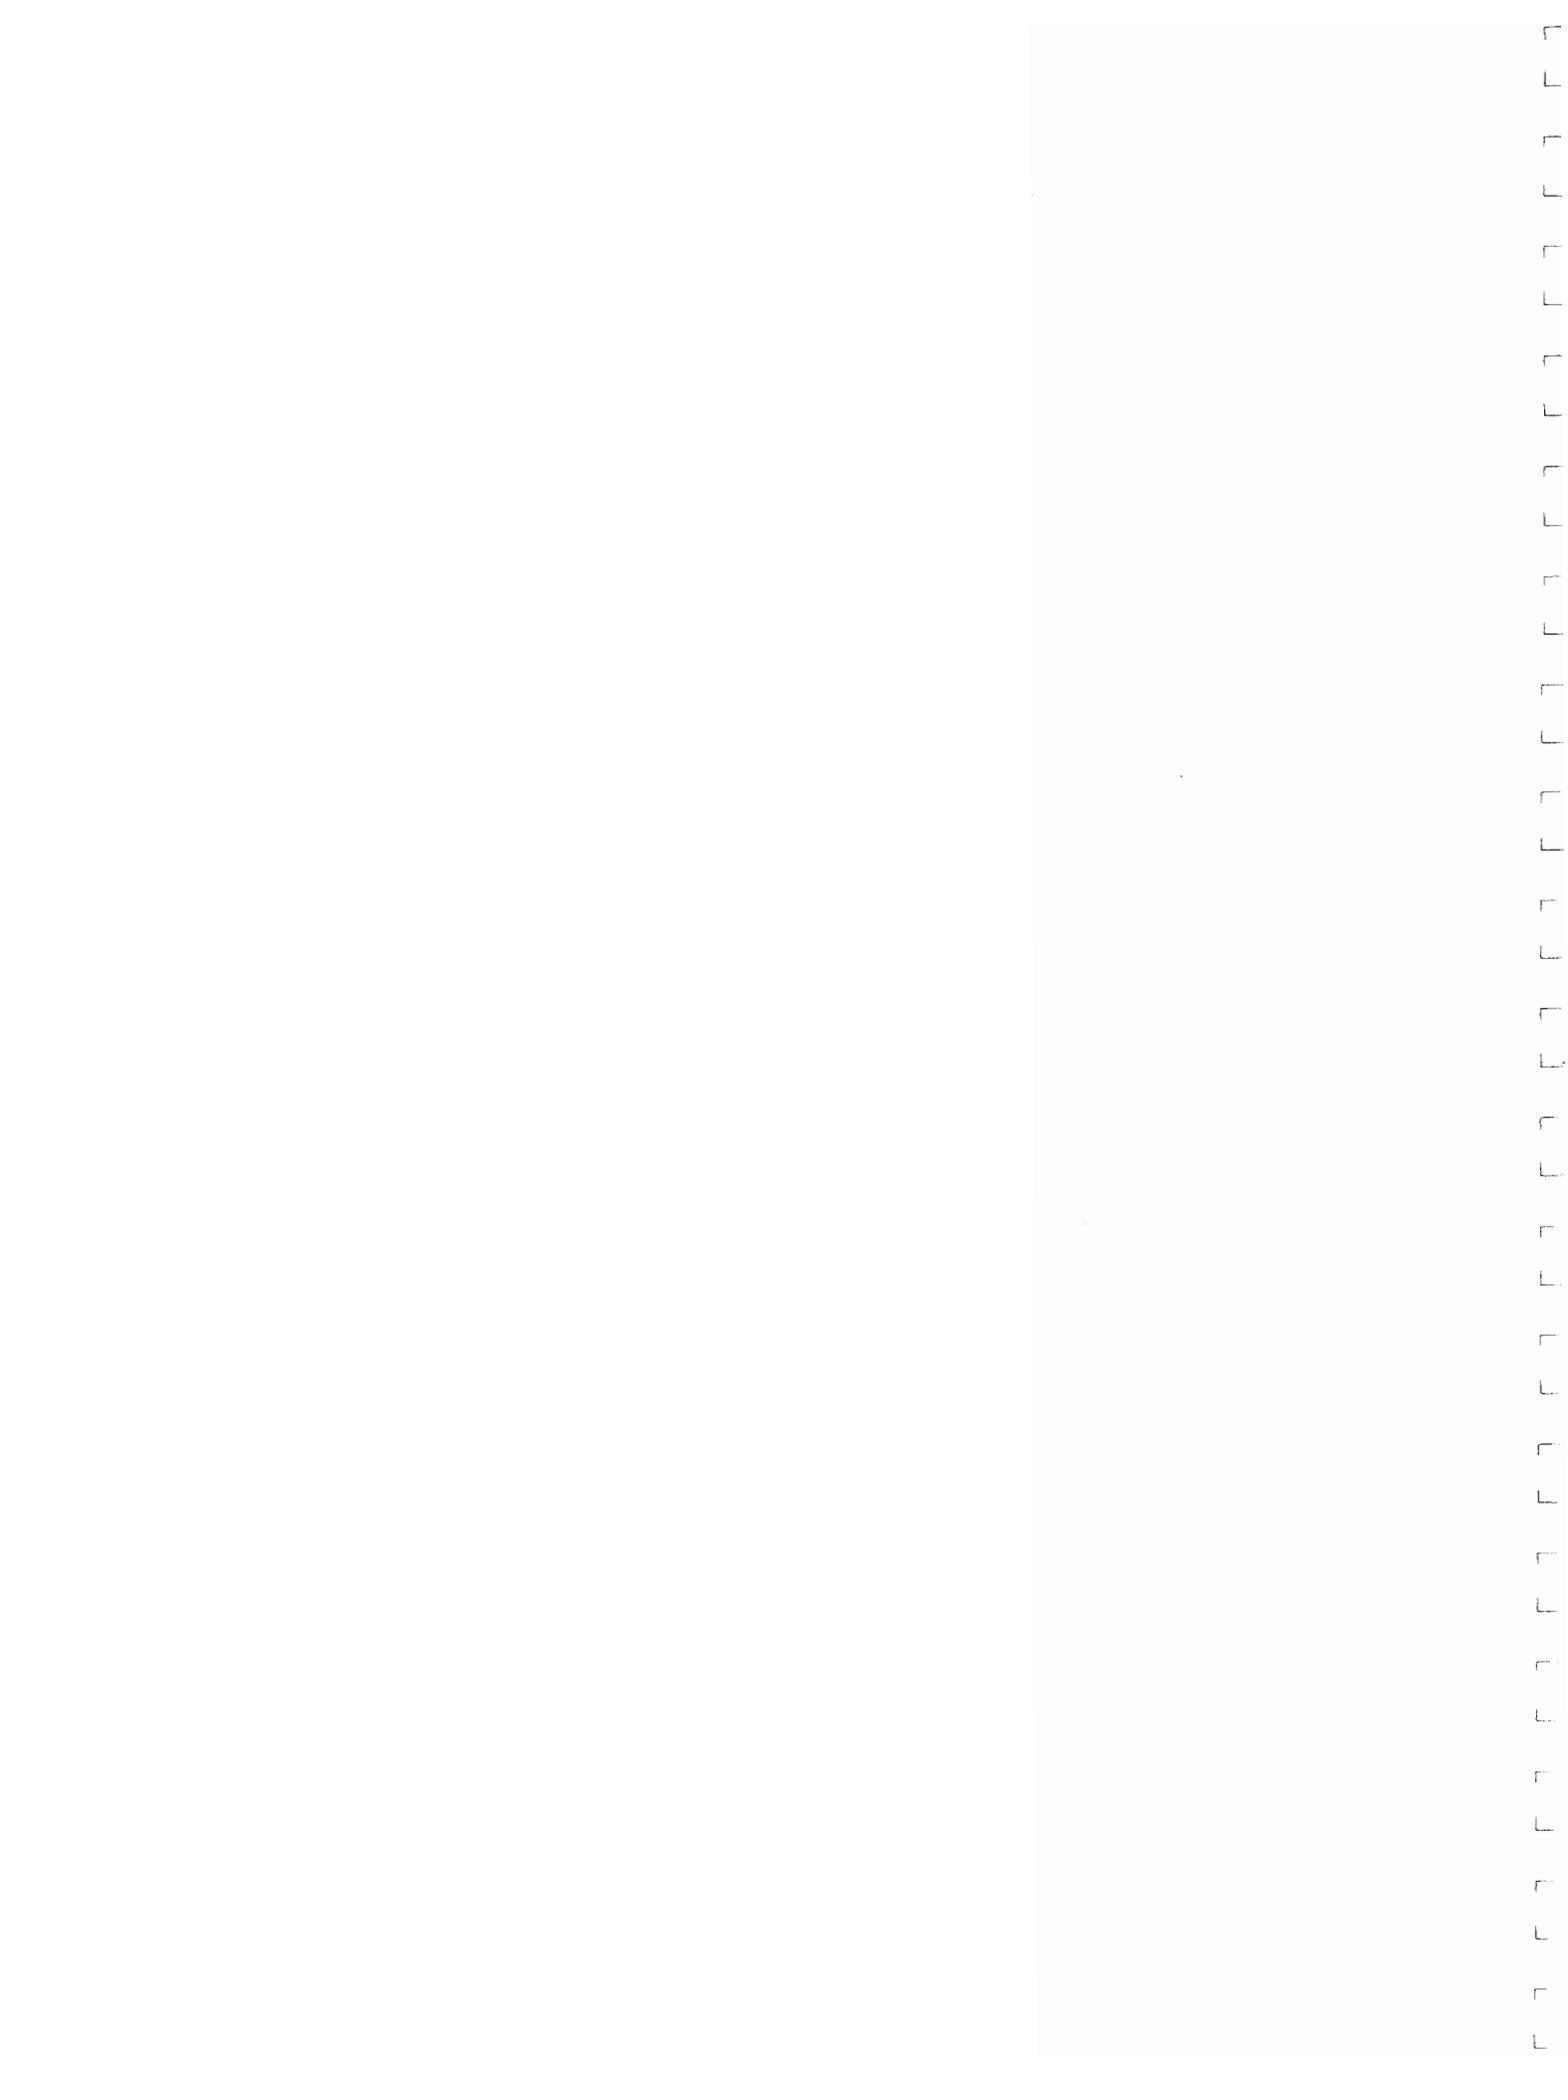

The Sampling Errors

As the survey is based on a sample, the estimates presented in this report are subject to sampling variation. In the following table this variation is presented in form of standard error of the rating based on total listeners.

Standard Error for Radio Audience Ratings

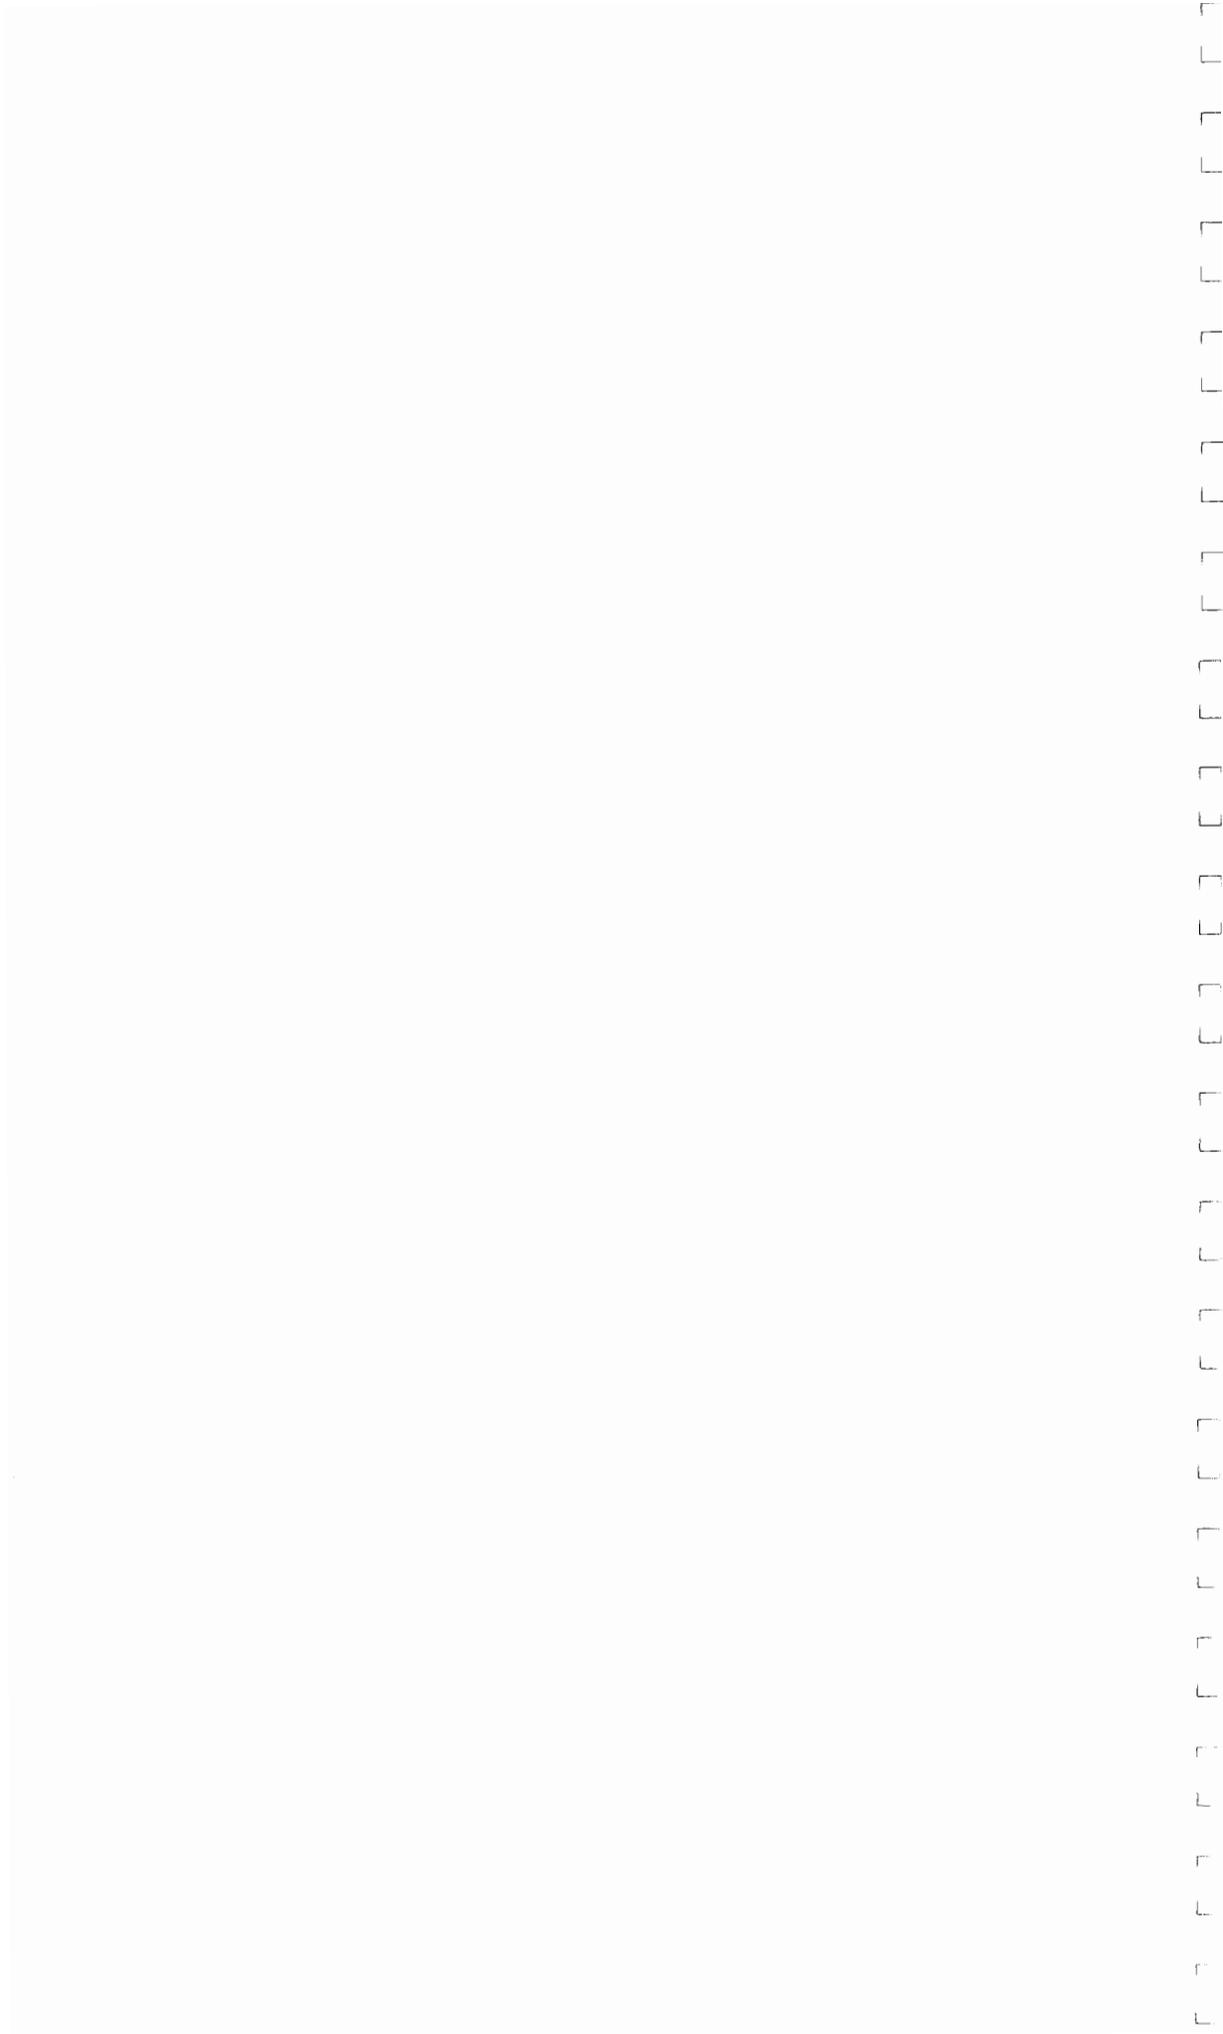

<u>Rating</u> (Per Cent)	<u>Standard Error</u> (Per Cent)
1	0.32
2	0.44
3	0.54
4	0.63
5	0.70
6	0.75
8	0.86
10	0.95
12	1.03
15	1.13
20	1.27
25	1.37
30	1.45
35	1.51
40	1.55
45	1.57
50	1.58
55	1.57
60	1.55
65	1.51
70	1.45

The ratings are estimates and should generally be interpreted along with its standard error. In a simple random sample, for example, a true rating based on a 10% estimate would fluctuate between 9.05 and 10.95 per cent ($10 \pm .95$) with an approximate probability of 68 per cent. The fluctuations with a probability of 95 per cent, for example, are between limits which are 1.96 times the corresponding standard error away on both sides. Thus, a true rating, if based on 10 per cent estimate, would be between 8.14 per cent and 11.86 per cent (that is, 1.96 times 0.95, the standard error away) for a confidence probability of 95 per cent.

February 9, 1972

Dear

In order to comply with approved standards of the Federal Trade Commission with reference to the Radio Audience Profile Survey which we are at present conducting in the San Juan Metropolitan Area covering the period from January 10 to January 30, 1972, we request from you the following information:

1. Are you conducting a promotional activity for your radio station during the period covered by the Radio Audience Survey?
2. If so, when was the promotional activity initiated?
3. What is the expected termination date of the promotional activity.
4. What is the nature of the promotional activity? Please describe the nature of the activity as completely as possible, including any prizes or awards which are to be given. Include copies of any announcements made over the air or passed out as printed material.

We would appreciate your prompt attention to this matter since this information should be in our hands prior to the publication of our report.

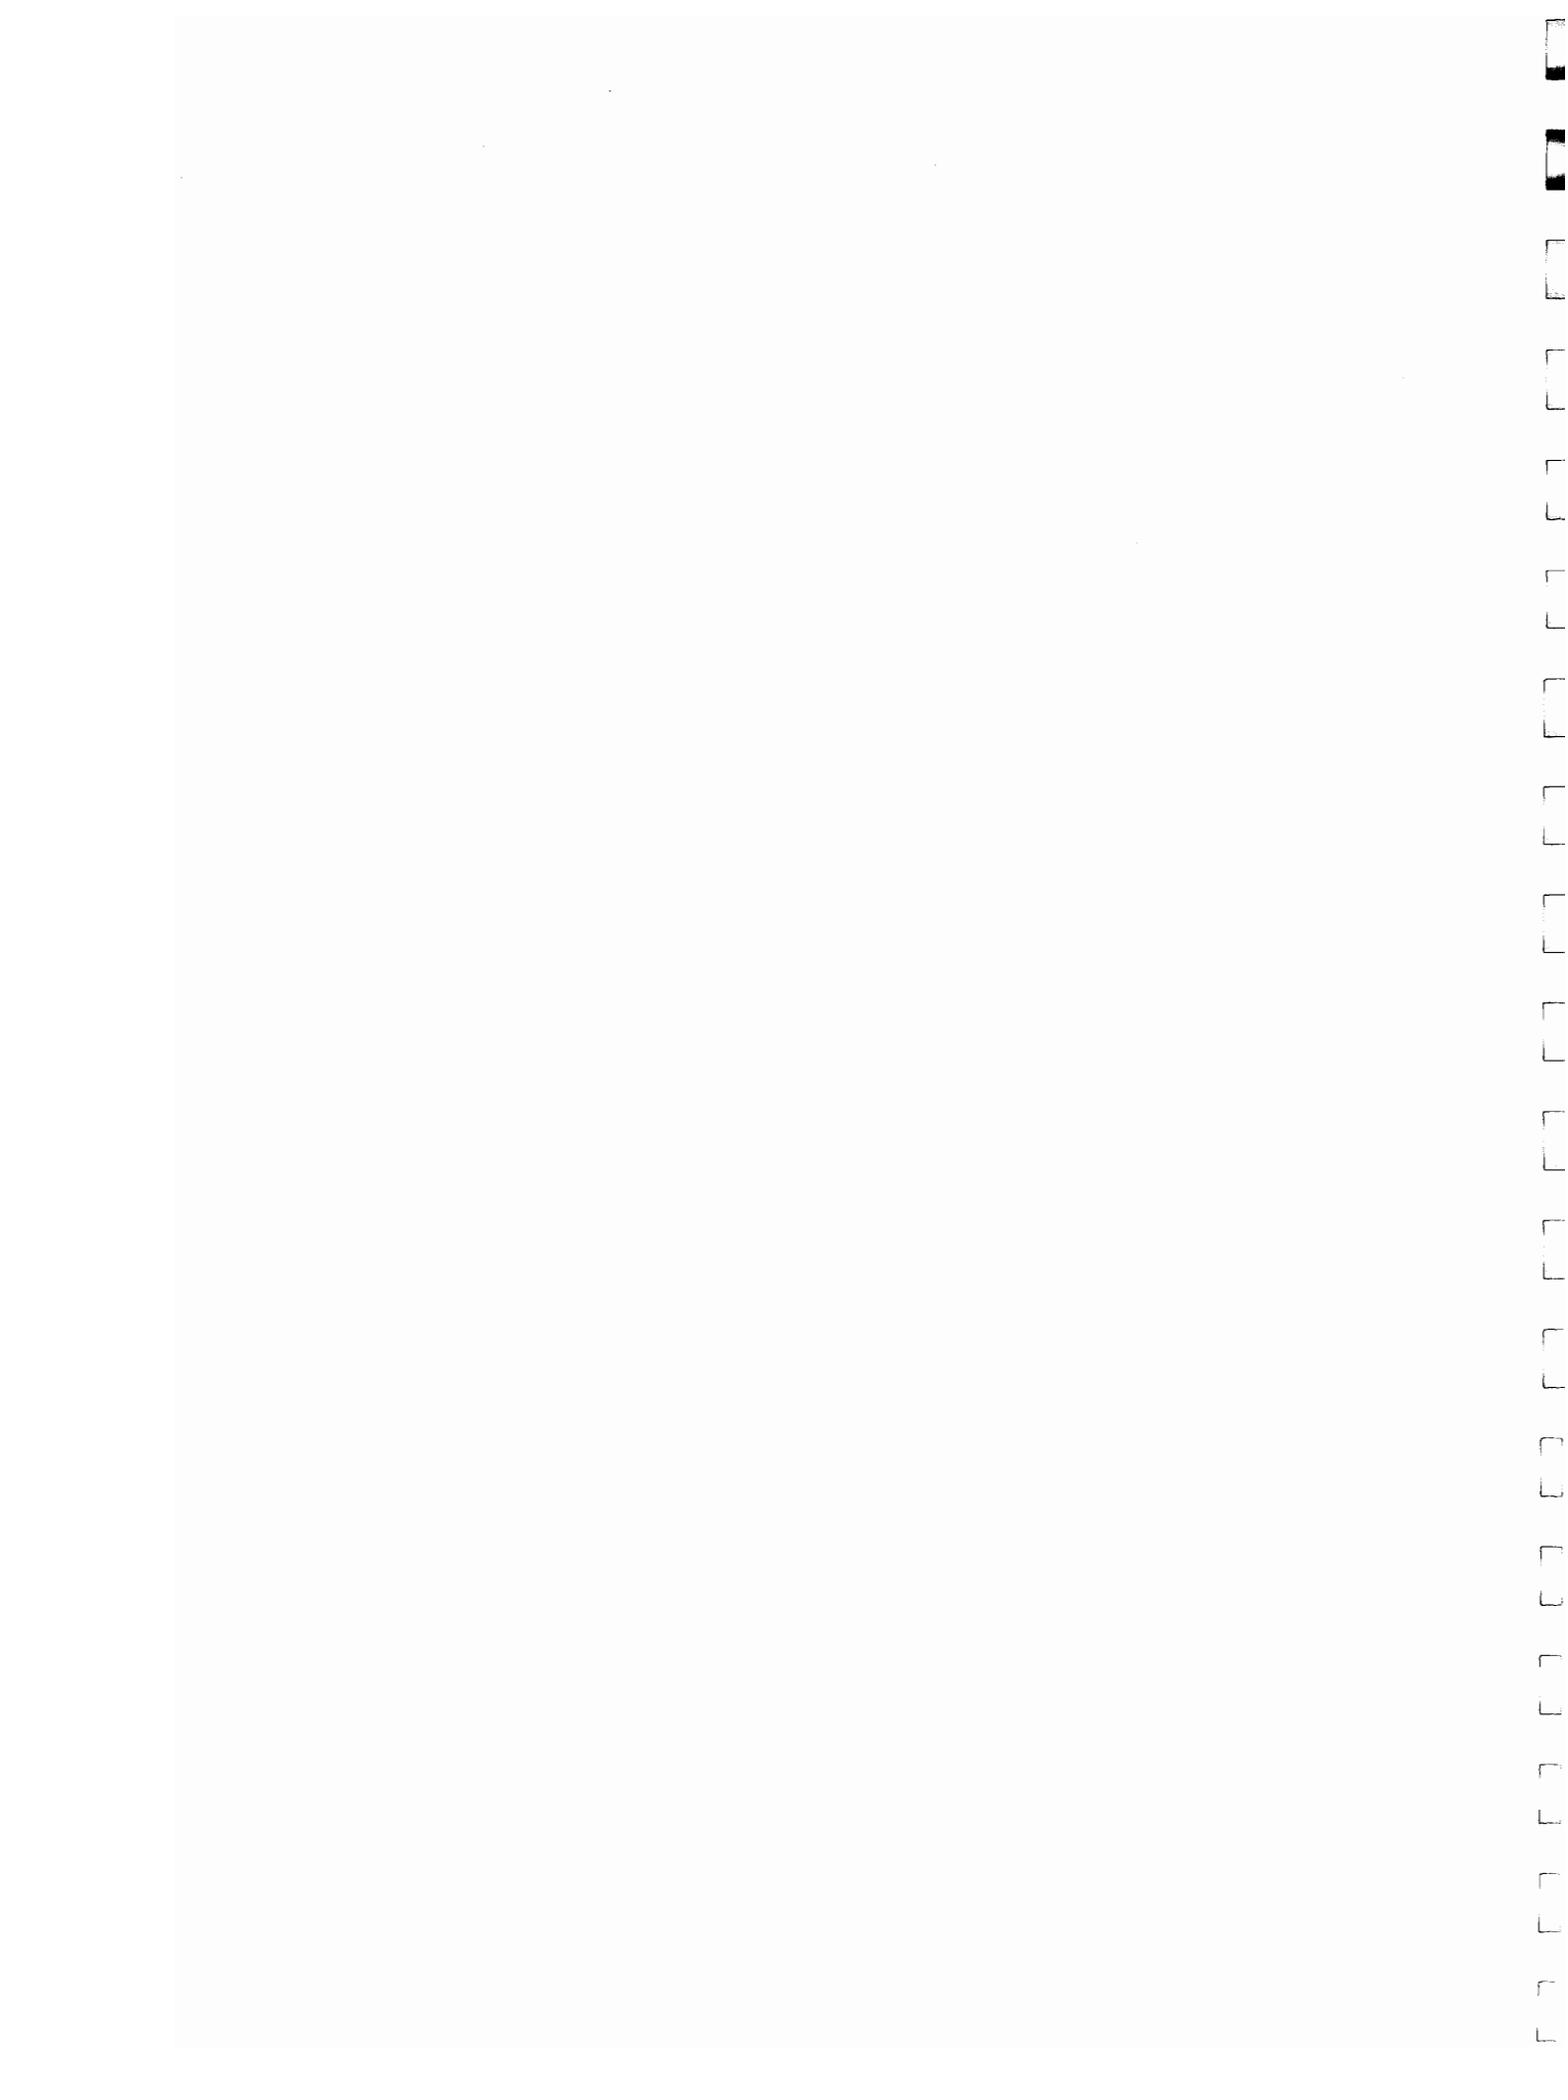

Cordially yours,

Alvin Mayne

1606 Ponce de Leon Avenue
San Juan, Puerto Rico 00909

Dear Mr. Mayne:

In response to your letter I wish to inform you that WAPA is not conducting any contests in connection with the rating now being undertaken. We have been running two promotions for sometime, the Discodromo and the Astro WAPA. We have no termination dates in mind for these promotions.

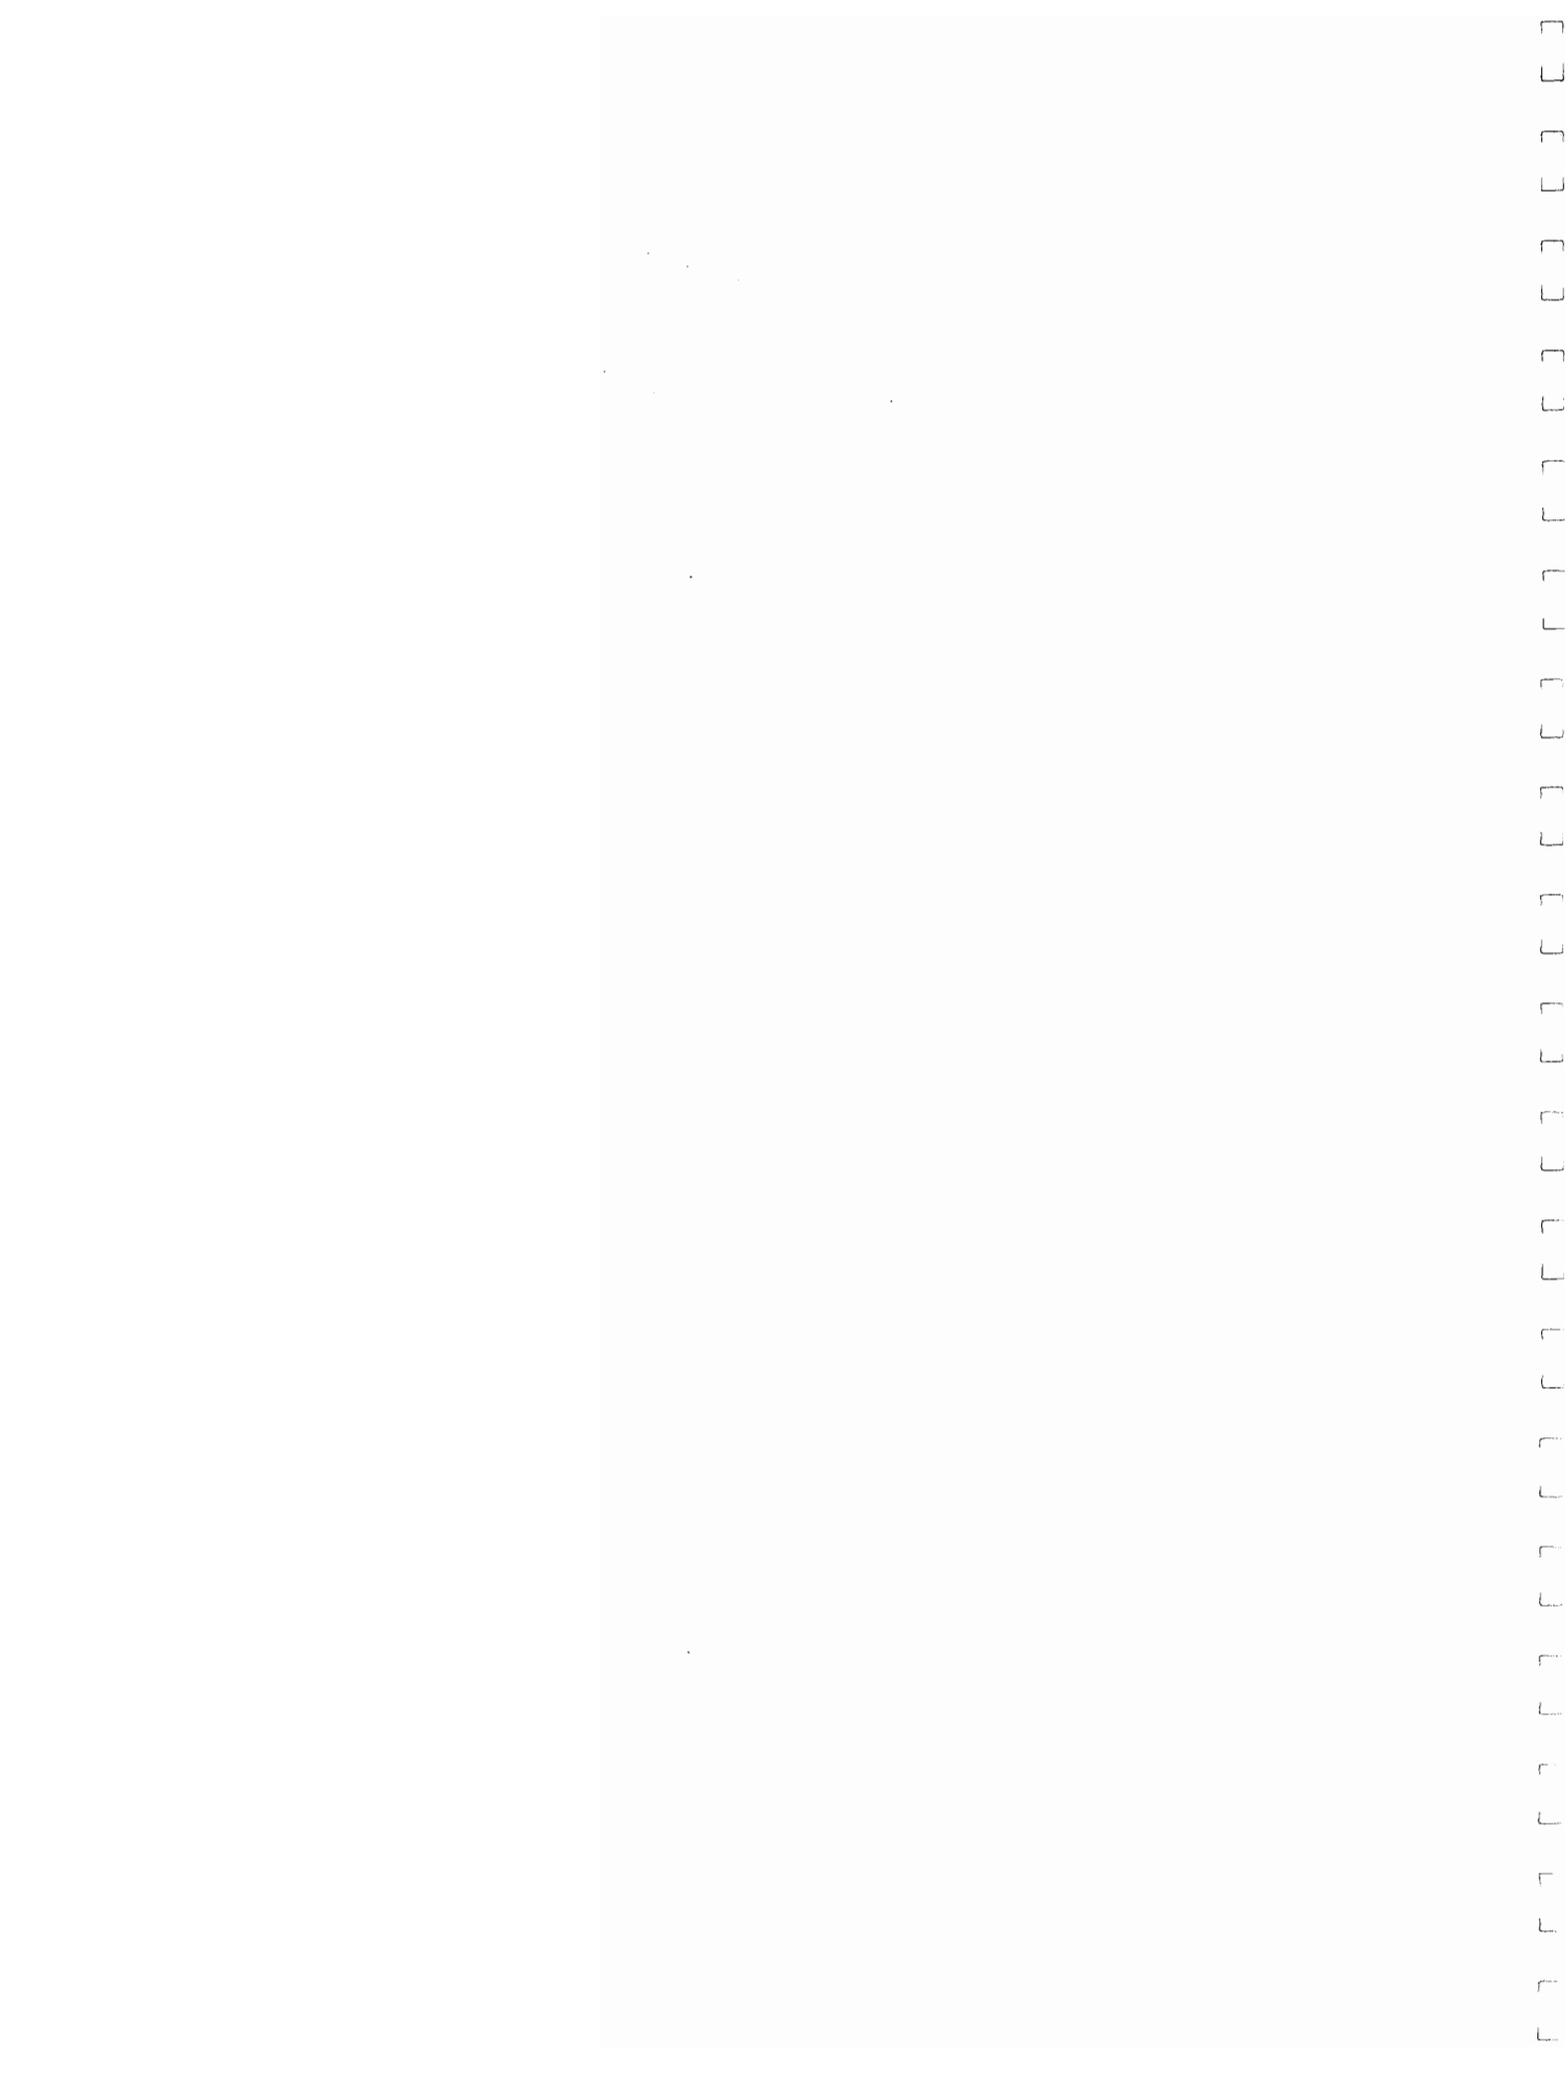

The Discodromo is a horse race type of game in which listeners win money by selecting the winning records played each day on the station. The Astro WAPA involves a mythical astronaut who lands in various areas of the island. If the person living where he lands calls WAPA, he wins a prize.

Thank you for your inquiry.

Best regards,

Ray Owen
Vice-President &
General Manager

Mr. Alvin Mayne
Clapp and Mayne, Inc.
1606 Ponce de Leon Avenue
San Juan, Puerto Rico 00909

Dear Alvin:

This is in response to your letter of February 9 in regard to the Radio Audience Profile Study recently completed by your firm.

WBMJ ran two (2) on-air promotions during the period January 10 to January 30, 1972.

One contest--American Top 40 Giveaway--started in early December and is still continuing at this time. This is a write-in contest requiring listeners to skillfully guess the top five (5) records in order on the American Top 40 program which is run each Sunday from 3 to 6PM. The prize consists of a copy of the program itself.

The other contest--Madame Zodiac--began on January 3, and terminated January 17 due to cut telephone lines during the recent strike. Listeners were asked to identify their birth "sign" and if it matched the "sign" appearing on a rotating cartridge, they won the prize. The jackpot was ascending in nature ... that is, increasing by \$5.00 each time there was no winner.

We have not enclosed copies of the announcements run over the air since there were quite a few different ones. We would, however, be happy to provide this information if you find it essential.

Best regards,

MID-OCEAN BROADCASTING, INC.

EL MUNDO BROADCASTING CORP.

February 14, 1972

Mr. Alvin Mayne
Clapp and Mayne, Inc.
1606 Ponce de León Avenue
San Juan, Puerto Rico 00909

Dear Mr. Mayne:

In reply to your letter of February 9 concerning promotional activities during the last survey, I can state the following:

During the dates of the survey the station did not engaged in any promotional activity different from the station's regular programming throughout the whole year.

The promotions which took place can be described as follows:

1. "Pregunta de la Hora"- The disc jockey reads a question on the microphone and the first listener who replies with the correct answer is entitled to a ticket for a local movie.
2. "Gane con su Apellido"- Every hour our disc jockey calls over the telephone a specific number and if the person called knows the amount of the jackpot, he wins such amount. The last name of the person to be called changes every hour and the jackpot increases every hour when the person does not answer correctly.

As I mentioned to you before, the station has been engaged in this promotion for a long time and does not envision terminating either one during the near future.

Cordially,

WKAQ RADIO 58

Cobian Center Building
Santurce, Puerto Rico 00909

Dear Mr. Mayne:

In answer to your letter of February 9, please be advised that WQBS is presently conducting four promotions, all of which commenced prior to the survey in question. These are the following:

1. Willard and Cuantos coquís tengo en la mano

These two promotions involve the award of the theater tickets to listeners first calling the Station after a given announcement and who correctly answers whatever question is asked. In the case of Willard the listeners have to catch a little mouse called Ben, the star of the film Willard. These two promotions are keyed to the running of a film in the area and its beginning and ending dates are determined by the booking runs of the film in question. Both promotions started on January 2, one of them is still carried on, and the other one, Willard, terminated on February 17. However, we wish to stress the point that the Station commenced the award of theater tickets on June 1971.

2. Péguese a QBS

Mr. Coquí is a roving representative who awards such prize as airlines tickets, radios, etc., to those found listening to WQBS. This promotion was started nine months ago and it is still carried on.

3. La Piñata de la Plata

This is a "jackpot" contest wherein listeners win the jackpot if they are able to guess the amount thereof upon random calls by the Station. This started about two years ago and it is still carried on.

Please advise if we can be of further assistance in this regard.

Dear Mr. Mayne:

In reply to your letter of February 9, during the period of January 10 to January 30, the only promotion we had on the air was our Jackpot Call (Llamada de la Suerte). This contest has been a regular feature on Radio UNO for the past year and a half.
